description

This series of fixed-voltage integrated-circuit voltage regulators is designed for a wide range of applications. These applications include on-card regulation for elimination of noise and distribution problems associated with single-point regulation. In addition, they can be used with power-pass elements to make high-current voltage regulators. One of these regulators can deliver up to 100 mA of output current. The internal limiting and thermal-shutdown features of these regulators make them essentially immune to overload. When used as a replacement for a zener diode-resistor combination, an effective improvement in output impedance can be obtained, together with lower bias current.

electrical characteristics at specified virtual junction temperature, $V_I = 11V$, $I_O = 40$ mA (unless otherwise noted)

PARAMETER	TEST CONDITIONS	T ‡	78L06			UNIT
			MIN	TYP	MAX	
Output voltage		25°C	5.75	6	6.25	V

Bias current change	$V_I = 9\text{V to }20\text{V}$	Full range			1.5	mA
	$I_O = 1\text{ mA to }40\text{ mA}$				0.1	

‡ Pulse-testing techniques maintain T_J as close to T_A as possible. Thermal effects must be taken into account separately. All characteristics are measured with a 0.33- μF capacitor across the input and a 0.1- μF capacitor across the output. Full range for the 78L05 is $T_J = 0^\circ\text{C to }70^\circ\text{C}$
