

**Features:**

- \*brand new and high quality.
- \*Made of high-quality materials, .
- \*5A DC Motor for PWM Speed Controller.
- \*By screwing the potentiometer, you can turn off power supply output. High voltage and high current resettable fuse, overcurrent automatic disconnection, power off for cooling for a few seconds fuses automatic recovery.
- \*Default disconnection of short circuit point. Please note: the operating voltage can be switched to 4.5V-35V by bridging the connectors marked '4.5V-35V' on the PCB.

**Specifications:**

Operating Voltage: DC 4.5V-35V

Output Current: 0-5A

Control Power: 90W(Max.)

Quiescent Current: 7uA(Standby)

for PWM Duty Cycle: 1% -100%

for PWM Frequency: 20khz

Size: 26x30mm/1.02x1.18"

Quantity: 1 Pc

Package Contents:

1 x Speed Controller
