

Three Element Three String Lithium Battery Protection Board

WIRING SEQUENCE

- ① Weld four (three) pressure lines in the correct sequence
- ② Battery negative electrode welding protection plate B - (no virtual welding at overcurrent point)
- ③ After confirming the successful welding of the pressure line, insert the pressure line head correctly into the protective plate. TZT
- ④ Welding P-connected to load and working normally

**Attention: Wiring in a non sequential manner may result in disconnection of power.
Please contact customer service for guidance in a timely manner!**

MATTERS NEEDING ATTENTION

- ① The protective plate and the pressure line cannot be connected together during welding
- ② Please strictly follow the wiring diagram for the welding sequence of the wiring harness, and do not misplace it. We Are The Distributor Of TZT Brand In Hong Kong, China
- ③ There should be no virtual soldering at points B - and P -, and the two points should not be connected in reverse. TZT

**If you have any questions, please consult customer service in a timely manner
Only connect the wires after fully understanding**

Indicate: It is normal for the appearance and color of the product to change due to different factory batches, but the function is the same!

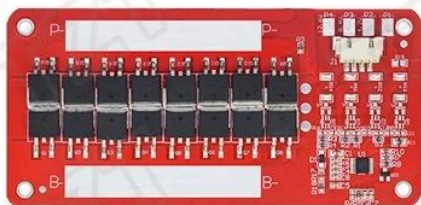

Don't take pictures if you mind!

**We do not support returns or exchanges of products due to appearance reasons
For more details, please consult customer service**

ORDER NOTICE

- 1: If you don't understand the technology or wiring diagram, please do not purchase without the necessary conditions. Blindly damaging the protective board is highly likely
- 2: We solemnly promise that the protective board will be shipped only after confirming that the full load testing parameters meet the standards before shipment! Once welded, it cannot be returned or replaced! TZT
