

## Product Details

The electromagnetic lock is only suitable for intermittent work. The inner coil of the studio will rise and cannot be kept open for a long time. Therefore, it is necessary to control the power-on time to avoid excessive power-on time and damage to the internal coil due to excessive temperature. This product is widely used in vending machines, lockers, mailboxes, shoe cabinets, lockers, transformer boxes and other cabinet doors

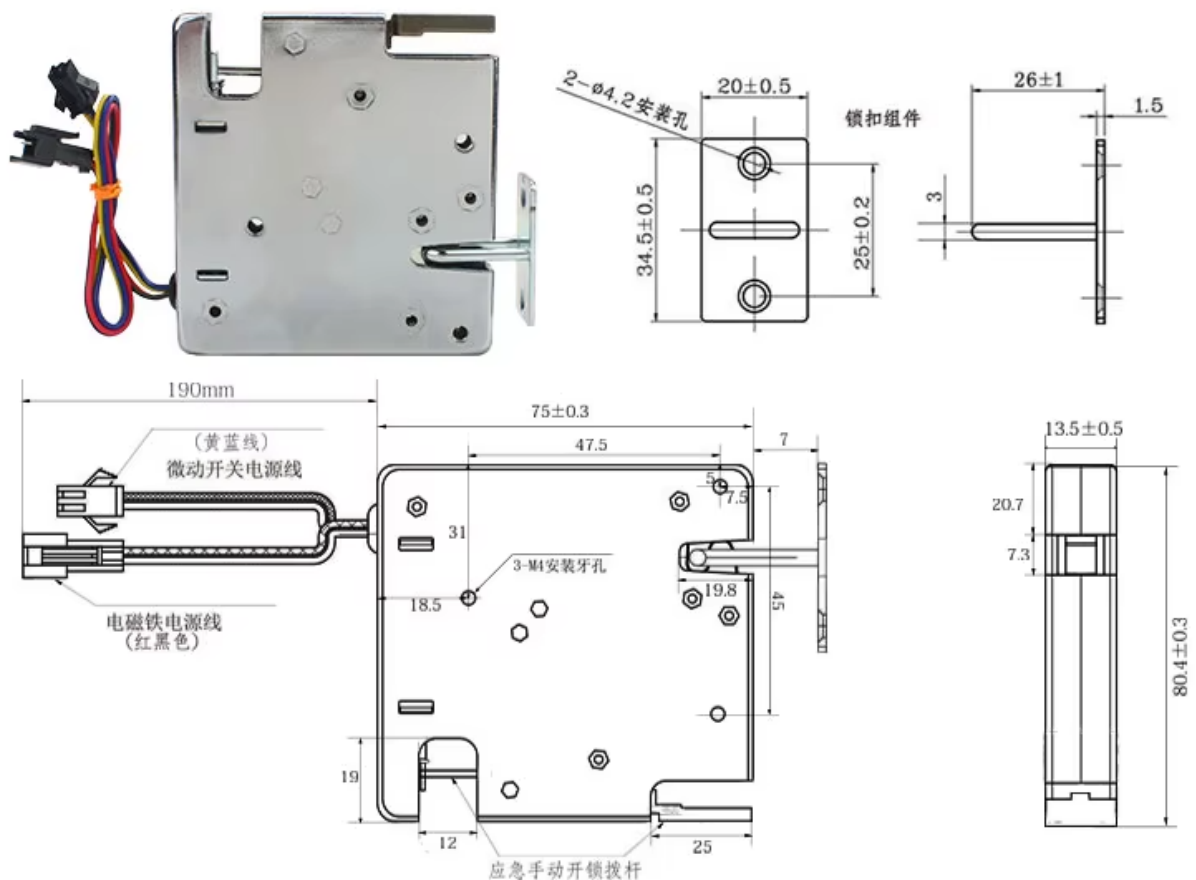

## product information

Item model number: XG06G Product material: zinc alloy electroplating shell Electrical parameters: DC12V/2A Security type: Power-on unlock/power-off manual door closing and locking Service life: under design load conditions, more than 300,000 times Product size: 75\*80\*13.5mm Scope of application: lockers, lockers, transformer boxes, etc

## Thickened zinc alloy shell, durable

1.5mm stamping electroplating shell, stronger anti-rust and anti-corrosion effect
