

Product Details

The electromagnetic lock is only suitable for intermittent work. The internal coil will increase in temperature during work and cannot be kept open for a long time. Therefore, it is necessary to control the power-on time to avoid excessively long power-on time and damage to the internal coil due to excessive temperature.

Product Model : XG-07H Operating Voltage : DC12V Working current : 2A Operating mode : Power-on unlock/power-off manual door close and lock Power-on time: 1-3S ; not long-term continuous power-on

Material : Zinc alloy Service life : 300,000 times Scope of use : Vending machines, wardrobes, shoe cabinets, lockers, etc. cabinet doors

SIZE PARAMETERS

Measurement unit: mm
